**CHAPTER 2 - ALTERNATIVES**

This chapter describes the process that was used to develop, evaluate, and eliminate potential alternatives based on the purpose and need of the Project. The chapter discusses how alternatives were selected for detailed study, the reasons why some alternatives were eliminated from consideration and describes how the alternatives meet the need for the project and avoid or minimize environmental harm. All reasonable alternatives are discussed at a comparable level of detail. The No Build Alternative is also included as a benchmark against which the impacts of the other alternatives are compared.
